Need to jump 3 (or more) versions on your IBM iSeries OS Upgrade?

- We can formulate a custom plan to solve the following requirement challenges…
  - Lack of direct IBM support for skipping 3 or more OS levels
    - ✓ Eliminate interim level implementations (in most cases)
  - Go-live simulation testing before throwing the switch
  - Accuracy of software license inventory for new version

- Don't gamble on your upgrade - gain a tested, lower risk go-live event
